TEXT:
...UNISYS: IBM, Unisys and Oracle lead initiative on industry standard for
collaborative web-based software development (C)1994-98 M2 COMMUNICATIONS
LTD RDATE:111198 -- Companies advance final proposal to formalize standard
...

...end-users, today presented the final proposal of an industry standard to
streamline collaborative application development efforts on the Web. The
three companies also demonstrated how disparate development tools and
environments can interoperate using the new specification. Known as the XML
Metadata Interchange Format specification, or XMI, the proposed industry
standard is intended to give teams of developers working with object
technology and using a diverse set of tools the ability to exchange
programming data over the Internet in a standardized way. As a result,
development teams using various tools from multiple vendors can still
collaborate on applications. The proposal was...

...The 20 additional supporters of the proposal include Rational Software
and SELECT Software Tools. By establishing an industry standard for
storing and sharing object programming and design information, development
teams using various tools from multiple vendors can still collaborate on
applications. The proposed XMI standard will allow developers to leverage
the Web to exchange data between tools, applications and repositories to
create secure...

...widely available supporting technology, including repositories and databases, significantly reduces the time and cost of **development** to provide product interoperability in distributed heterogeneous software environments. "With XMI as a single standard for data interchange in a collaborative **development** environment, companies can reap the benefits of time savings and productivity gains in application **development**," said Emilie McCabe, vice president of marketing, IBM Application **Development**. "Corporate **developers** can rely on tools from multiple vendors and **build** applications faster by creating them in a collaborative environment and reusing application parts and models." Why XMI The XMI specification allows **developers** to create distributed applications in a vendor-neutral environment, and demonstrates the commitments of IBM, Unisys and Oracle to providing standards-based technology to the **development** community. XMI aims to make the eXtensible Markup Language (XML) -- integrated with the OMG's...

...OMG Object Analysis and Design Task Force. "As today's demonstrations indicate, our vision -- that **developers** would visually design models for various domains and then share objects and metadata regardless of **development** tool or environment -- is quickly becoming reality." Demonstrating the Real and Substantial Benefits of XMI...

...XMI. The vendors showed the exchange of UML model between a variety of modeling and **development** tools and repositories, including IBM's VisualAge for Java **development** environment, IBM VisualAge TeamConnection enterprise repository, the object **building** technology of IBM WebSphere Enterprise Application Server, IBM DB2 Universal Database, Rational Rose, SELECT Component...

...model before passing it on to the next vendor. "XMI provides the basis for collaboratively **developing** and standardizing other information models," said Peter Thomas, executive product manager, Repository Technologies, Oracle Corporation...

...validating and sharing document formats on the Web, while UML is designed to give application **developers** a common language for specifying, constructing and documenting distributed objects and business models. MOF is...

...supporters of the XMI proposal include the following companies: Ardent, Aviatix, Boeing, Cayenne Software, Genesis **Development**, ICONIX, Inline Software, Integrated Systems, MCI Systemhouse, NCR, Nihon Unisys, NTT, Rational Software, SELECT Software...

...systems for all types of computing platforms, allowing customers to take full advantage of the **new** era of e- **business**. The fastest way to get more information about IBM software is through the IBM software **development** and adoption of a CWMI standard by OMG in the near future. Also, for two years, IBM has been a leading contributor to the Meta Data Interchange Specification (MDIS), **developed** by the Meta Data Coalition, an industry consortium of 54 vendors working to enable the...

...Unisys Corporation. IBM, VisualAge for Java, VisualAge TeamConnection, WebSphere Enterprise Application Server, and DB2 Universal **Database** are **trademarks** or registered **trademarks** of International Business Machines Corporation. Oracle is a registered trademark of Oracle Corporation. All other...
